GENERAL DESCRIPTION

The Next Generation Scholar 2.0 VDH and VAH heat pumps and air conditioners are modular HVAC systems designed to provide heating, cooling, and outside fresh air for school classrooms. The units are installed in the classroom against an exterior wall. The vertical configuration minimizes the floor space occupied by the HVAC unit. This unique design makes it ideal for both new schools and for renovation of existing classrooms.

A full range of ventilation options – from the GreenCube® ERV, to a ventilation damper - are offered to meet any climate or budget. A wide selection of architectural louvers provides the designer with unlimited styles and configurations to compliment the exterior of the school. (For a complete description of the architectural louvers, please refer to the Marvair brochure entitled, "Architectural Extruded Aluminum Louvers".) Marvair offers a full range of thermostats to meet virtually every requirement. The unit can be controlled by a wall mounted thermostat, an internal thermostat or interfaced with a energy management system.

Scholar 2.0 heat pumps and air conditioners are available in cooling capacities from 2 to 5 tons with a 2-stage compressor (cooling only) as standard. Electric resistance or hot water is available as primary heat on the air conditioners and as second stage heat on the heat pump. All sizes are available for operation on 208/230 V. 1Ø or 3Ø and 460 V. 3Ø electrical supply. All models conform to UL/CSA standard 60335-1 and 60335-2-40 and CAN/CSA C22.2, No. 236-11 Ed.4 and listed by ETL.

Features and Benefits

Scholar 2.0

Ease of Installation

- Modular construction for ease of upper floor installs
- ERV plate with no moving parts
- · Air box height clears window sills
- · Can be installed as free blow or ducted
- No clearance needed for corner installation
- Internal Electric Heat

Next Generation R-454B Refrigerant

- 78% Lower GWP than R-410A
- Non-Ozone Depleting Refrigerant
- Synthetic Lubricant
- Reduced Compressor Wear

Rugged Cabinet Construction

- Optional Double-Wall Cabinet constructed of 16 gauge galvanized steel
- · Hinged doors with optional tamper resistant locks
- Non-Corrosive drain pans

GreenCube® Energy Recovery Ventilators (ERV)

- Removes Both Moisture and Heat from the Incomina Air Stream
- · Optimized for Hot Gas Reheat

Scholar 2.0 Advantages

Since their introduction in 1991, Scholar heat pumps and air conditioners have been the undisputed leader in interior, self-contained classroom HVAC systems. Students in tens of thousands of classrooms across the USA have benefited from the environment provided by Scholar heat pumps and air conditioners.

The Next Generation Scholar 2.0 builds on this history with unique design innovations and features.

➤ Exceeds DOE Efficiency Requirements

All Scholar 2.0 models are at least 11EER and 3.3 COP.

➤ Modular Construction for Ease of Installation

The upper module consists of a packaged air conditioner or heat pump while the lower module houses the ventilation section. These modules can be easily separated to reduce the height of the unit to fit through doors and inside elevators. This also reduces the weight that must be moved into position and eliminates the need to tilt the unit onto its side.

Scholar units can be mounted in a corner, provided that at least one side of the return remains open. These units feature returns on both sides, and as long as one side is unobstructed, the unit will operate properly. Indoor blower speeds can be adjusted via the PLC to compensate for the additional static pressure caused by one side being restricted.

For an additional charge, slotted front doors can be requested. These doors allow return air to enter through the exposed side and the front, offering the most efficient configuration for corner installations—though this is not required.

➤ Quiet Operation for a Better Learning Environment

The Scholar 2.0 meets and exceeds ANSI/ASHRAE Noise Criteria. A high efficiency axial fan moves air silently through the condenser coils. Specially designed interior panels absorb sound. A low vibration, scroll compressor insures quiet operation as well as energy efficiency. The indoor air mover utilizes a revolutionary electronically commutated motor (ECM). This motor consumes a minimum of power with whisper quiet operation. Throughout this Data Sheet features, options and components that minimize sound levels are designated by the "Quiet Zone" logo.

➤ High efficiency means lower operating costs

The latest in scroll compressor technology with ultra high efficiency indoor and outdoor air movers, generous lanced fin with rifled tube evaporator and condenser coils combine for Integrated Part Load Values (IPLV's) of up to 14.5.

➤ 2-Stage Compressor

Scholar 2.0 heat pumps and air conditioners come standard with a 2-stage compressor with a first stage capacity of 65% of the total capacity. The 2-stage compressor provides better comfort and improved energy efficiency compared to many older, single stage compressors.

➤ Humidity Control

The control of humidity is essential for a positive learning environment. Scholar 2.0 heat pumps and air conditioners actively control humidity with both standard controls and several optional accessories for schools where control of humidity is an everyday concern. The electronically commutated motor optimizes moisture removal by automatically controlling the air flow across the indoor coil. Unconditioned outdoor air for ventilation is not brought directly into the classroom. Ventilation air first passes through the indoor coil to temper the air and remove moisture. It then is mixed with classroom air before being introduced into the classroom.

➤ Scroll Compressor and R-454B Refrigerant

The heart of every air conditioner or heat pump is the compressor and the Scholar 2.0 utilizes a scroll compressor specifically designed to use next generation R-454B refrigerant. The heavy duty scroll compressor is quieter and operates with less damaging vibration than older compressors that operate on R-410A. Since R-454B can absorb and release heat more efficiently, they run cooler reducing the risk of burnout due to overheating.

➤ GreenCube®

Energy Recovery Ventilator (ERV)

The optional GreenCube® ERV is a total energy recovery ventilator, removing both moisture and heat from the incoming air stream. With an outdoor wet bulb of 74°F and an indoor dry bulb of 72°F and 450 cfm of outside air, the GreenCube will remove 8 pints per hour of moisture from the incoming fresh air stream.

For optimum control of the humidity, the GreenCube® ERV should be used in conjunction with Hot Gas Reheat. This complete, factory assembled optional coil and controls economically maintains the temperature and humidity in the classroom.

Low Noise and High Efficiency Features

The Scholar 2.0 was designed from the onset for unsurpassed quiet operation and high efficiency. With duct, sound levels can be greatly reduced. In addition, many of the same components that enable the Scholar 2.0 to have such quiet operation, contribute to its high efficiency.

➤ Electronically Commutated (EC) Indoor Air Mover Motor

Scholar 2.0 heat pumps and air conditioners use an Electronically Commutated (EC) motor for the indoor air mover and provides a number of advantages over conventional induction motors.

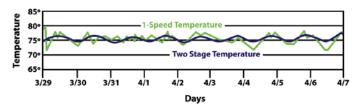

- Constant Torque Factory set, but can be adjusted in the field to compensate for high static filters, grilles or duct work. At a given torque setting, the EC motor has a lower drop in air flow with increasing static compared to a conventional PSC motor.
- Quiet The three phase brushless DC motor construction results in a very low torque ripple and the rotor construction effectively eliminates noise transmission through the shaft. Unlike a conventional induction motor that repeatedly cycles on & off, the EC motor is always powered, but cycled through an external low control voltage programmed to slowly ramp up to speed, eliminating the abrupt sound at start-up.
- Ultra-High Efficiency On constant fan speed, the motor consumes 60-80 watts compared to 400 watts for an induction motor.
- Reliable The motor's electronics are mounted on a potted single board design less susceptible to damage from moisture.

➤ 2-Stage Compressor

A two stage compressor offers better comfort and improved overall energy efficiency. The second stage is only functional in the cooling mode. Heating and dehumidification are single stage.

- Better Comfort. The two stage compressor is able to maintain more precise temperature and relative humidity levels. During mild days, the first stage can satisfy the load, minimizing temperature fluctuations providing steady, even comfort.
- Energy Efficiency. The Scholar 2.0 heat pump with the two stage high efficiency compressor can provide significant energy savings compared to older, less efficient systems.

Hot Gas Reheat for humidity control.
 The outside air requirements of classrooms require a special emphasis on control of humidity.
 The Scholar 2.0 with hot gas reheat and the two speed compressor provide a comprehensive, yet affordable solution. It is a complete factory assembled unit designed to provide dehumidification of fresh air and room air. See page 5 for a complete description of Hot Gas Reheat for dehumidification.

EASE OF **I**NSTALLATION

Scholar 2.0 heat pumps and air conditioners are installed in the classroom against an exterior wall. The outdoor air box slides into an opening in the exterior wall. The outdoor air box provides for the ingress and egress of the condenser air as well as the intake and exhaust for the ventilation air. The bottom of the outdoor air box is adjustable from 24" to 33" from the base of the unit, enabling it to clear the sills of windows. For existing schools this greatly facilitates installation since expensive structural changes to exterior walls are not required. By having the fresh air intake three feet above grade, stagnant, moisture laden air is not introduced into the classroom.

Scholar 2.0 heat pumps and air conditioners can be installed as a free blow or ducted system. Free blow and ducted plenums are built in various heights to match the color and appearance of Scholar 2.0 units.

Scholar 2.0 units are available with a full range of accessories for customizing the installation including, base stands, decorative trim panels, and outdoor louvers.

The Scholar 2.0 is shipped with the outdoor air box not installed and is designed to be quickly installed in the field. This allows Scholar 2.0 heat pumps and air conditioners to fit comfortably through a three foot wide door.

Service and Maintenance

All service and maintenance is performed from the front or side of the unit – there is no need to slide the unit away from the wall. The heavy duty hinged front panels open 180° to facilitate access to parts, air filters and controls. Both the indoor and outdoor coils are easily accessible for cleaning.

RUGGED CABINET CONSTRUCTION

The Scholar 2.0 internal structural is comprised of 16 gage galvanized steel and the exterior cabinet is constructed of 20 gage galvanized steel with a mark and scratch resistant polyester finish. A corrosion-resistant stainless steel drain pan is standard in all Scholar units. Grey is the standard cabinet color, but other colors are available.

The hinged doors permit easy access to the filters and components for service and maintenance. Tamper resistant locks which require a special tool are standard.

Dehumidification Options

➤ Reheat Dehumidification

Scholar 2.0 heat pumps and air conditioners with hot gas reheat are complete factory assembled units designed to provide dehumidification of fresh air and room air. Hot gas reheat can be used with the single stage or two stage compressor and with any supplemental heat and the GreenCube® ERV or motorized damper ventilation options. Hot gas reheat is controlled by an external humidity controller or BAS control. For optimum performance, hot gas reheat should be used in conjunction with the GreenCube® ERV. When used with the motorized damper, hot gas reheat alone may not maintain satisfactory control of the humidity in the classroom over all outdoor conditions.

A pulsing reheat valve maintains a constant discharge temperature during reheat operation. This temperature can be adjusted after installation.

Operation - If the humidity rises above the set point on the dehumidistat and the temperature in the classroom is satisfied, both mechanical cooling and the HGR coil operate to temper the air and lower the humidity. If the temperature in the classroom rises above (or falls below) the set point of the thermostat and the unit is operating in the dehumidification mode, the call for cooling (or heating) will override the call for dehumidification and the reheat coil is disengaged until the thermostat is satisfied. This assures the environment temperature is maintained as first priority and humidity control is second. Note: Scholar 2.0™ units with the hot gas reheat coil require a dehumidistat for proper operation. (See Optional Controls.)

HEAT OPTIONS

All heat options are available for the Scholar 2.0 heat pumps and air conditioners. Electric resistance or hot water heat is used as heat on air conditioners and to supplement, where required, the heat pump cycle.

➤ Electric Resistance Heat

Installs above the indoor air blowers inside the cabinet and is an integral part of the packaged unit. Refer to Model Identification table for available heat options.

➤ Hot Water Heat

Installed above the indoor air blowers inside the plenum. Hot water coil capacities for the Scholar 2.0™ models are shown in the Hot Water Output data table. See Field Installed Accessories.

CABINET CONSTRUCTION OPTIONS

➤ Coastal Installations

For installation in coastal areas where salt corrosion may be a problem, the Scholar 2.0 heat pumps and air conditioners may be ordered with a stainless steel drain pan for the indoor coil and a corrosion resistant coating on the outdoor coils.

A Marvair® First – Factory Installed Economizer

Marvair Scholar 2.0 air conditioners and heat pumps have been the industry standard since their introduction. Tens of thousands of Marvair Scholar classroom units are in operation.

Here's how the economizer works: On a signal from the wall mounted indoor thermostat that cooling is required, either mechanical cooling with the compressor or free cooling with the optional economizer is provided. A factory installed enthalpy controller determines whether the outside air is sufficiently cool and dry to be used for cooling. If suitable, the compressor is locked out and the economizer damper opens to bring in outside air. Integral pressure relief allows the interior air to exit the classroom, permitting outside air to enter the classroom. The temperature at which the economizer opens is adjustable from 63°F (17°C) at 50% Relative Humidity to 73°F (23°C) at 50% Relative Humidity.

After the enthalpy control has activated and outside air is being brought into the building, the mixed air sensor measures the temperature of the air entering the indoor blower and then modulates the economizer damper to mix the right proportion of cool outside air with warm indoor air to maintain 50-63°F (10 - 17°C) air being delivered to the building. This prevents shocking the electronic components with cold outside air. The compressor is not permitted to operate when the economizer is functioning.

If the outside air becomes too hot or humid, the economizer damper closes completely, or to a field selectable minimum open position, and mechanical cooling is activated.

VENTILATION OPTIONS

➤ Configuration "A": Blank-Off Plate

No ventilation. No introduction of outside air. Available with PLC or control board.

➤ Configuration "C": Economizer

The economizer reduces the cost of air conditioning by using outside air when acceptable to cool the room (Free Cooling). The factory installed Marvair® economizer has integral pressure relief.

When used with minimum position potentiometer (optional), the Marvair® economizer can meet requirements of ASHRAE Std. 62. Available only with PLC equipped Scholars.

➤ Configuration "E": Motorized Fresh Air Damper w/Pressure Relief & Independent Control

This ventilation option allows the user to set the desired outside air intake from fully closed to fully open with independently adjusting intake and exhaust air movers and positive shut off with spring return dampers." The PLC allows the position of the "E" damper to be set for desired outside air intake from fully closed to fully open. Setting 15 of the control board configuration menu allows the user to set the position from 20 (2VDC / Closed) to 100 (10VDC 100% open). The damper position can be adjusted in 1VDC increments to any position from closed to 100% open as required. Operation: Upon a "Call for Motorized damper" via a 24V signal from an external user-installed device, the motorized damper opens to the position selected in the PLC configuration menu setting 15 and the indoor blower operates. A 24VAC signal {sourced from LVTB 24VAC "R" and supplied through a user-provided Normally Open (NO) contact} activates (opens) the Motorized Damper and connected Relief Damper. When the 24VAC signal is removed, the motorized damper spring returns to the fully closed position and the indoor blower stops operation. The motorized damper Does NOT open when there is a call for the indoor fan (G). This operation can be automatically controlled or manually controlled by a 24v AC signal."

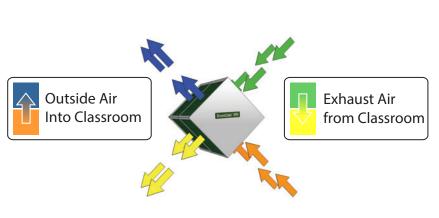

Note: This circuit does not interrupt the compressor or heater operation. Available only with PLC equipped Scholars.

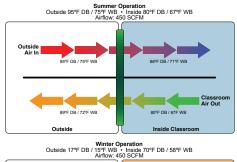

➤ Configuration "N": Manual Fresh Air Damper with Pressure Relief Ventilation (Standard) Dedicated adjustable intake air mover Adjustable up to 450 CFM with pressure relief Available ventilation.

Dedicated adjustable intake air mover. Adjustable up to 450 CFM with pressure relief. Available with PLC or control board.

➤ Configuration "O": GreenCube® ERV Ventilation (Optional)

The Marvair GreenCube ERV is an enthalpy plate heat exchanger that transfers both sensible and latent energies between outgoing and incoming air streams in a cross flow arrangement with virtually no cross-contamination of air streams. Except for two air movers, it has no moving parts. The media is impregnated with a polymeric desiccant that exchanges water by direct vapor transfer using molecular transport without the need of condensation. In addition, the desiccant is a bactericide. Two MERV 6 type filters are used on both sides of the enthalpy core. The fresh air and exhaust motors have independent speed controllers to permit each of the air movers to be regulated independently. Available only with PLC equipped Scholars.

THERMOSTAT/CONTROLLERS

➤ Thermostats and Controllers for Marvair Scholar Heat Pumps and Air Conditioners

See the *Marvair Thermostats and Controllers Product Data Sheet* for the thermostats and controllers for use with Marvair Scholar heat pumps and air conditioners.

Scholar 2.0 Standard Controls

➤ High Pressure and Loss of Charge (HP) or Low Pressure (A/C) Switches Includes a lockout relay.

> PLC Controller

The PLC is a factory installed Programmable Logic Controller. LED indicator lights show operational status and provide assistance with diagnosis if troubleshooting is ever required. The controller can perform extensive self diagnosis to assess the operational status and indicate a fault when detected. The controller can be programmed remotely or with a removable program storage device. Pertinent statistical data regarding the history of the refrigerant system is also stored.

The controller in the Scholar 2.0[™] heat pumps and air conditioners improves reliability due to a reduction of components and simplification of control panel wiring and can control a Building Automation System (BAS) and various ventilation operations.

➤ Defrost Control

Based upon time and temperature. The time interval can be adjustable from 30 to 90 minutes in one minute increments. The control system initiates a defrost cycle only if the outdoor coil temperature is 28°F or below. (heat pump only)

➤ Anti-short Cycle Timer

Prevents the compressor's motor windings and starting controls from destructive overheating. The time interval is adjustable from three to eight minutes.

➤ EMS Control Relay (24V only)

Provides a 24 VAC coil to control operation from a Building Automation System.

Note: An additional EMS control relay can be added when 120 or 240 VAC coils are required.

➤ Outdoor Thermostat

Prevents second stage heat (electric or wet heat) from operating above desired outdoor temperature set point and can be set to activate second stage heat while disabling the compressor below desired outdoor temperature. (heat pump only)

➤ Electric Heat Control

Controls operation of electric heat and allows either simultaneous or non-simultaneous operation of electric heat and the compressor (heat pump only).

➤ Ventilation Control

The fresh air damper with PowerVent and GreenCube® ERV ventilation options are equipped with a Fresh Air Fan Speed Control. The fresh air fan controls the ventilation intake blower together, supplying up to 450 CFM of outside air if/when desired.

➤ Indoor Blower Fan Speed Controller

Allows field calibration of the indoor blower to minimize sound levels for specific installations.

Phase Monitor

Monitors 3ø power supply and will not allow the unit to operate if the power supply is not properly phased. Not required on 1ø units.

➤ Condensate Float Switch

Shuts down the Scholar 2.0 unit in the event of a clogged condensate drain.

OPTIONAL CONTROLS

➤ Dehumidistat

Wall mounted type dehumidification controller controls operation of the hot gas reheat coil for dehumidification. Adjustable dehumidification range. Required for Scholar 2.0™ heat pumps and air conditioners with hot gas reheat.

OTHER OPTIONS

➤ Anti-Microbial Light

A germicidal UV light destroys toxic bacteria, viruses and mold on the indoor air coil.

➤ Cold Plasma Air Purification Device

Installed inside the Scholar 2.0 unit, this device neutralizes odors, kills mold, bacteria and viruses. It also helps to control allergens, asthma, smoke and airborne particles. *These statements are based on customer testimonials and have not been evaluated by the FDA.

➤ MERV 11 or 13 Return Air Filters

Factory installed two inch (51 cm) MERV 11 or 13 filters. Ultra high filtration material that removes most airborne mold, spores and dust. Replaces standard MERV 8 return air filters.

➤ Protective Coil Coating Packages

The Scholar 2.0 is available with corrosion protection coatings for the condenser and evaporator coils.

Cold Plasma Air Purifier

FIELD INSTALLED ACCESSORIES

Note: Color must be specified when ordering certain accessories. "-XXX" in the Part Number indicates color. 100 = Marvair Beige | 200 = Gray | 400 = White

➤ Trim Piece

The trim piece provides a color coordinated panel between the cabinet and the wall and is used to conceal a gap when the Scholar unit with the minimum depth Wall Sleeve is deeper than the wall. Built in the same color as the cabinet and in various widths. Trim pieces provide a finished appearance and cover any space between the back of the cabinet and the wall. Each Trim Piece is 5 feet long and each scholar unit requires 4 kits per unit for a 10 foot ceiling. See Dimensional Drawings.

| Description | Part Number |
|--|-------------|
| 6" Trim Piece Kit | M/06662-XXX |
| 8" Trim Piece Kit | M/04054-XXX |
| 9" Trim Piece Kit | M/04055-XXX |
| 12" Trim Piece Kit | M/04056-XXX |
| 15" Trim Piece Kit | M/04057-XXX |
| Contact your Marvair sales representative if special dimensions are required | |

➤ Base Stand

A Base Stand matches the Scholar 2.0 cabinet and raises it off the floor to align the wall sleeve to different window sill heights. The Base Stand is available in several colors to match the color of the unit.

| Description | Part Number |
|----------------|-------------|
| 2" Base Stand | |
| 3" Base Stand | S/13101-XXX |
| 4" Base Stand | S/12903-XXX |
| 5" Base Stand | |
| 6" Base Stand | S/13147-XXX |
| 7" Base Stand | S/13252-XXX |
| 8" Base Stand | |
| 9" Base Stand | S/13253-XXX |
| 10" Base Stand | S/13185-XXX |
| 12" Base Stand | |
| 13" Base Stand | S/13254-XXX |
| 14" Base Stand | S/13103-XXX |
| 15" Base Stand | S/13104-XXX |

➤ Base Stand Trim Kit

The decorative Base Stand Trim kit matches the Scholar 2.0 cabinet and is included when an 8" or taller Base Stand is required to match the existing window sill height.

| Description | Part Number |
|-------------------------|-------------|
| 8" Base Stand Trim Kit | S/13153-XXX |
| 9" Base Stand Trim Kit | |
| 10" Base Stand Trim Kit | S/13186-XXX |
| 12" Base Stand Trim Kit | S/13152-XXX |
| 13" Base Stand Trim Kit | S/13251-XXX |
| 14" Base Stand Trim Kit | S/13151-XXX |
| 15" Base Stand Trim Kit | S/13150-XXX |

➤ Dry Erase Board

Self adhesive dry erase board measures 3'H x 4'W and provides an excellent surface for displaying student art or important announcements.......03867

➤ Condensate Pan Freeze Protection

To prevent freezing of water in the condensate lines and in the drain pans, this kit should be installed in locales subject to freezing temperatures. The kit includes a heater for the outdoor condensate pan......K/40184

➤ Wall Sleeve

Sheet metal panel assembly to transition from Scholar unit and outdoor louver.

| Description | Part Number |
|-----------------------------|-------------|
| 44"H x 36"W x 13"D (Center) | S/12893 |
| 46"H x 34"W x 13"D (Closet) | |
| 44"H x 44"W x 13"D | S/12877 |

➤ Outdoor Louver

Aluminum louver for covering the outside wall opening. Available in dark bronze or clear anodized. Exterior louver includes 1/2" x 1/2" bird screen. See Dimensional Drawings.

| Description | Part Number |
|----------------------------|-------------|
| 46"H x 44"W Outdoor Louver | 93206 |
| 44"H x 44"W Outdoor Louver | 93611 |

➤ Plenum Options

Freeblow Plenum: Mounts to the top of the Scholar unit to direct airflow into the classroom when a ducted installation is not required. The front grille has individually adjustable louvers which provide a full range of airflow direction. Two side supply grilles with louvers enhance the air flow in the classroom. All grilles have a clear brushed aluminum finish to be used with Scholar 2.0 units with no heat or electric resistance heat. See Dimensional Drawings.

| Description | Part Number |
|---|-------------|
| 10" Freeblow Plenum (Insulated With No Insulation Fiber Exposed) | S/13112-XXX |
| 10.5" Freeblow Plenum (Insulated With No Insulation Fiber Exposed) | S/13034-XXX |

Ducted Plenum: Allows for easy installation of duct work using a flanged rectangular opening on the top of the plenum.

| Description | Part Number |
|---------------------|-------------|
| 10.5" Ducted Plenum | S/12868-XXX |
| 12.5" Ducted Plenum | S/12890-XXX |

Hot Water Plenum: Installed above the indoor air blowers inside the plenum. Hot water coil capacities for the Scholar 2.0™ models are shown in the Hot Water Output data table. Hot water heat is factory installed and is plumbed from the top right side of the plenum. As a standard safety feature, the hot water coil has a protective 24 volt thermostat embedded within it to shut off air flow across the coil if the coil temperature drops to 32°F. The Hot Water Plenum is 16.5" high. See Dimensional Drawings.

| Description | Part Number |
|------------------|-------------|
| Hot Water Plenum | S/13258-XXX |

➤ Freeblow Plenum Supply Grilles

The frame and blades are 6063 extruded aluminum alloy with a 2000-R1 satin anodized finish. To eliminate corrosion and vibration, the frame is separated from the blade with injection molded bushings. All blades are air foil in design and are individually adjustable. A specially engineered channel on the outside of the frame holds an extruded flexible vinyl bulb gasket that produces a positive air seal at the mounting surface.

| Description | Part Number |

➤ Freeblow Plenum Extender

Docerintion

A Freeblow Plenum Extender is used when the Scholar unit and Freeblow Plenum combination doesn't reach the ceiling height of the classroom and a "column" floor to ceiling appearance is desired.

| Description | Part Number |

| 5000 | 16400 | 1.92 |

In accordance with UL 60335-2-40, for units above 600m, multiply the minimum room area stated in the table above by the correction factor that corresponds with the altitude the unit is located at. This will give you a new minimum room area that is adjusted for your altitude. The units listed in this manual are not intended for use above 5000 meters.

²EER=Energy Efficiency Ratio

³Integrated Part Load Value is an integrated efficiency measure from 1st and 2nd stage capacity modulation.

High Temperature Heating & 5COP is rated at 47°F DB/43°WB (8.3°C DB/6.1°C WB) outdoor and 70°F (21.1°C) return air.

COP=Coefficient of Performance
 CFM=Cubic Feet per Minute
 FEM Motor Set Point

Ratings are at 230 volts for 208/230 volt units ("A" & "C" models) and 460 volts for "D" models. Operation of units at a different voltage from that of the rating point will affect performance and air flow.

Sensible Heat Ratios based upon ANSI/AHRI std. 390 outdoor conditions of 95°F (35°C) outdoor and 80°F DB/67°F WB (26.5°C DB/19.5°C WB) return air.

¹MCA = Minimum Circuit Ampacity (Wiring Size Amps)

²MFS = Maximum Fuse or HACR Breaker Size

³SPPE = Single Point Power Entry

MCA & MFS are calculated at 230 volts on the "A" & "C" models and 460v on the "D" models. This chart should only be used as a guideline for estimating conductor size and overcurrent protection. For the requirements of specific units, always refer to the data label on the unit.

- 1. MFS (Maximum Fuses Size) value listed is the maximum value as per UL 60335-2-40 calculations for MOCP (branch-circuit conductor sizes in this chart are based on this MOCP). The actual factory installed Overcurrent Protective Device (Circuit Breaker) in the models may be lower than the maximum UL 60335-2-40 allowable MOCP value, but still above the UL 60335-2-40 minimum calculated value or Minimum Circuit Ampacity (MCA) listed.
- 2. The end user shall size conductors based on the Single Point Power Entry (SPPE) Minimum Circuit Ampacity. The service circuit breaker shall not be sized less than the minimum circuit ampacity associated to Single Point Power Entry value provided. The service circuit breaker shall also not be sized greater than the Maximum Fuse size associated to the Single Point Power Entry Value Provided.
- 3. While this electrical data is presented as a guide, it is important to electrically connect properly sized fuses and conductor wires in accordance with the National Electrical Code and all local codes.

¹Heat Pump = Total Heat Pump Unit Amps (Electric Heat is not Operating).

Total Maximum Heating Amps = Total Amps with the Compressor, Motors and Electric Heat Operating at the same time.

Heating kW is rated at 240 volts on the 208-230v. (HPA & HPC) models. Derate heater output by 25% for operation at 208 volts. Heating kW is rated at 480 volts on the HPD models. Three phase models contain single phase motor loads. Values shown are maximum phase loads. Loads are not equally balanced on each phase.

¹MCA = Minimum Circuit Ampacity (Wiring Size Amps) ²MFS = Maximum Fuse or HACR Breaker Size ³SPPE = Single Point Power Entry MCA & MFS are calculated at 230 volts on the "A" & "C" models and 460v on the "D" models. This chart should only be used as a guideline for estimating conductor size and overcurrent protection. For the requirements of specific units, always refer to the data label on the unit.

- 1. MFS (Maximum Fuses Size) value listed is the maximum value as per UL 60335-2-40 calculations for MOCP (branch-circuit conductor sizes in this chart are based on this MOCP). The actual factory installed Overcurrent Protective Device (Circuit Breaker) in the models may be lower than the maximum UL 60335-2-40 allowable MOCP value, but still above the UL 60335-2-40 minimum calculated value or Minimum Circuit Ampacity (MCA) listed.
- 2. The end user shall size conductors based on the Single Point Power Entry (SPPE) Minimum Circuit Ampacity. The service circuit breaker shall not be sized less than the minimum circuit ampacity associated to Single Point Power Entry value provided. The service circuit breaker shall also not be sized greater than the Maximum Fuse size associated to the Single Point Power Entry Value Provided.
- 3. While this electrical data is presented as a guide, it is important to electrically connect properly sized fuses and conductor wires in accordance with the National Electrical Code and all local codes.

¹MCA = Minimum Circuit Ampacity (Wiring Size Amps) ²MFS = Maximum Fuse or HACR Breaker Size ³SPPE = Single Point Power Entry MCA & MFS are calculated at 230 volts on the "A" & "C" models and 460v on the "D" models. This chart should only be used as a guideline for estimating conductor size and overcurrent protection. For the requirements of specific units, always refer to the data label on the unit.

- 1. MFS (Maximum Fuses Size) value listed is the maximum value as per UL 60335-2-40 calculations for MOCP (branch-circuit conductor sizes in this chart are based on this MOCP). The actual factory installed Overcurrent Protective Device (Circuit Breaker) in the models may be lower than the maximum UL 60335-2-40 allowable MOCP value, but still above the UL 60335-2-40 minimum calculated value or Minimum Circuit Ampacity (MCA) listed.
- 2. The end user shall size conductors based on the Single Point Power Entry (SPPE) Minimum Circuit Ampacity. The service circuit breaker shall not be sized less than the minimum circuit ampacity associated to Single Point Power Entry value provided. The service circuit breaker shall also not be sized greater than the Maximum Fuse size associated to the Single Point Power Entry Value Provided.

While this electrical data is presented as a guide, it is important to electrically connect properly sized fuses and conductor wires in accordance with the National Electrical Code and all local codes.

¹Heat Pump = Total Heat Pump Unit Amps (Electric Heat is not Operating).
2Total Maximum Heating Amps = Total Amps with the Compressor, Motors and Electric Heat Operating at the same time.
Heating kW is rated at 240 volts on the 208-230v. (HPA & HPC) models. Derate heater output by 25% for operation at 208 volts. Heating kW is rated at 480 volts on the HPD models. Three phase models contain single phase motor loads. Values shown are maximum phase loads. Loads are not equally balanced on each phase.

Contact your Marvair sales representative if special dimensions are required

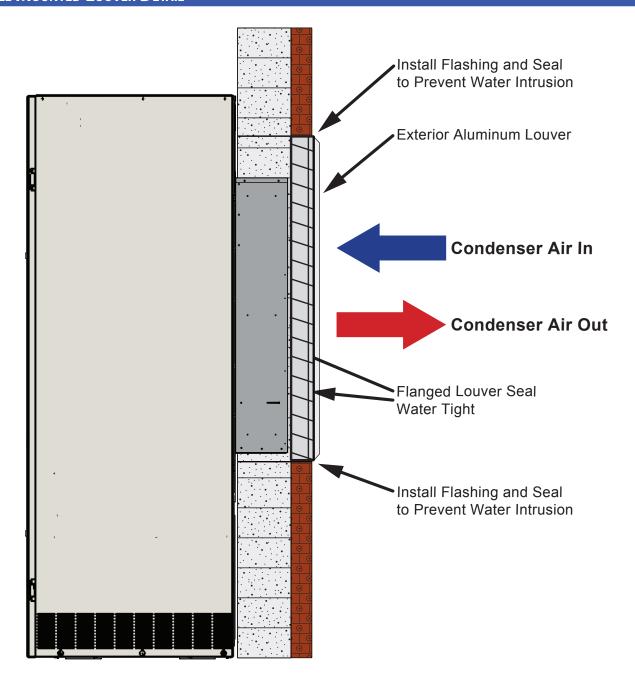

Typical Installation Detail

Note:

- 1. Coordinate installation of unit with general contractor for a complete and airtight installation. Caulk unit casing to wall.
- Installation of the louver must be performed by the mechanical contractor and caulked by the general contractor
- 3. Provide blank off panel on rear of louver to seal off unused portion of louver.

WALL MOUNTED LOUVER DETAIL

Notes

Please consult the Marvair® website at www.marvair.com for the latest product literature. Detailed dimensional data is available upon request. A complete warranty statement can be found in each product's Installation/Operation Manual, on our website or by contacting Marvair at 229-273-3636. As part of the Marvair continuous improvement program, specifications are subject to change without notice.
